Dear Mr. Yarbrough:

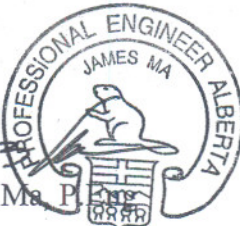

Re: Registration of Annugas Production Enhancers[®] and Components

In accordance with the Province of Alberta's Safety Codes Act, Annugas Production Enhancers[®] (manufactured by Annugas Compression Consulting Ltd.), walking beam gas compressors and integral parts, are not required to be registered as pressure equipment with ABSA. Section 2 subsection (2)(j) of the Pressure Equipment Exemption Order (Alberta Regulation 56/2006) states: "The *Pressure Equipment Safety Regulation* does not apply to... a pressure container that is an integral part of a rotating or reciprocating mechanical device, where the primary design considerations or stresses of the device are derived from the functional requirements of the device".

The hoses that connect to the walking beam gas compressors are also not required to be registered as long as they are manufactured in accordance with RMA (Rubber Manufacturers Association) IP-2 *The 1996 Hose Handbook*. CSA B51-03, Part 1 clause 8.2 states: "...flexible hose assemblies manufactured in accordance with RMA IP-2 or an equivalent standard shall not require registration".

If you have any questions, please give me a call at 469-5870 ext. 112.

Sincerely,

Dr. James Ma P. Eng. 

We're committed to helping your business succeed, so please feel welcome to call any of our staff if you need a second interpretation of any code or have questions of a technical nature. This is a complimentary service we offer to our clients.
